

Software Development Engineer in Test / Automation Tester

London, Derby or Milton Keynes

Attractive salary and benefits package

We provide products and services that are already improving the operational delivery of rail services. Our vision is to create a truly connected rail network, using our deep technology expertise and rail industry experience to deliver game-changing solutions that improve the quality of transport across the UK and beyond. We are a company that is excited by the possibilities offered by technology and are driven by improving experiences for passengers globally.

We have consistently innovated to create a best in the market product, delivering high levels of automation into complex operational environments. We continue to evolve our offer and recently integrated our technology with our own Traffic Management System; an operational and technical first. Our service offer continues to grow, taking advantage of technologies including cloud and data analytics.

To make this happen, we are looking for a curious and creative, motivated individual to undertake feature-driven testing of complex web-based applications. We will be looking for you to contribute to and help shape our progression with testing in an agile development environment, helping to implement test automation and other new and emerging QA practices.

What are the key objectives?

- You contribute to the quality and delivery of world-class software products and applications in an agile development environment
- You are responsible for creating, maintaining, and executing manual and automated test scripts under the direction of the Test Lead
- You are responsible for maintaining automated test frameworks and test tooling
- You mentor and support other team members

Person Requirements

Profile

- You have excellent communication skills
- You will be a team player, not afraid to step out of your role where it is best for the team
- You are an excellent problem-solver, show initiative, and enjoy overcoming challenges
- You have a highly analytical mindset with a keen attention to detail
- You are highly motivated and organised, able to manage your workload and commitments
- You are confident and approachable, able to build relationships and collaborate with others
- You are resilient and willing to work outside of your comfort zone, and thrive in a supportive and dynamic environment

Technical Competencies

- You have strong knowledge of agile methodologies, software testing principles and industry-standard ALM tooling (e.g. Azure DevOps, GitHub)
- You have a working knowledge of one or programming languages (e.g. Java and/or JavaScript) and able to adopt new languages quickly

- You have a working knowledge of test automation frameworks (e.g. Selenium, Cucumber, Cypress)
- You have experience of working with complex systems and large datasets used in complex operational environments

Joining Resonate

We offer an attractive package: alongside your salary, we provide matched pension payments and a range of health and wellbeing benefits. We want you to have a rewarding career with us, where you learn, develop your skills and take on new tasks. We ensure you have access to the training and development you need, combining courses, online training and learning as part of your work.

This role could be based in Derby, Milton Keynes, or London (we have beautiful contemporary workspaces at all three offices). We have a flexible, hybrid approach to work and work location - so please talk to us about your preferences and how these could work for both you and the team. We do require everyone to be in one of our offices at least once a week.

For this reason, this role could be full- or part-time, with flexibility over start and finish times. We recognise that everyone has commitments outside of work and in return for your talent and commitment, we provide this flexibility to enable you to work most effectively.
